

Radial BigShot EFX - order # R800 7204

The BigShot EFX is a true-bypass effects loop switcher that lets you set up two separate effects loops and insert them into your pedal chain at will. This means that noisy pedals or tone robbing pedals that you 'love to hate' can now be used and completely taken out of the signal path when they are not needed.

Better yet, while an effects-loop is in 'standby' you can turn on and off pedals in that loop to setup for your next sound. Then, with one foot stomp you can turn on as many pedals as you like for professional multi-effects performance without the usual tap dancing!

For those that like quiet tuning, you can use the second loop as a tuner out and the BigShot EFX will mute your signal with a single stomp. Compact, rugged and plug & play easy to use the EFX gives you lots of control in a really small package plus it delivers straight through true-bypass for pristine tone.

Features

- Two individual effects loops
- True-bypass signal path for straight through tone
- Ground lift feature to reduce hum & buzz
- Tuner-mute option for loop-2
- Compact and rugged for pro pedalboards

Applications

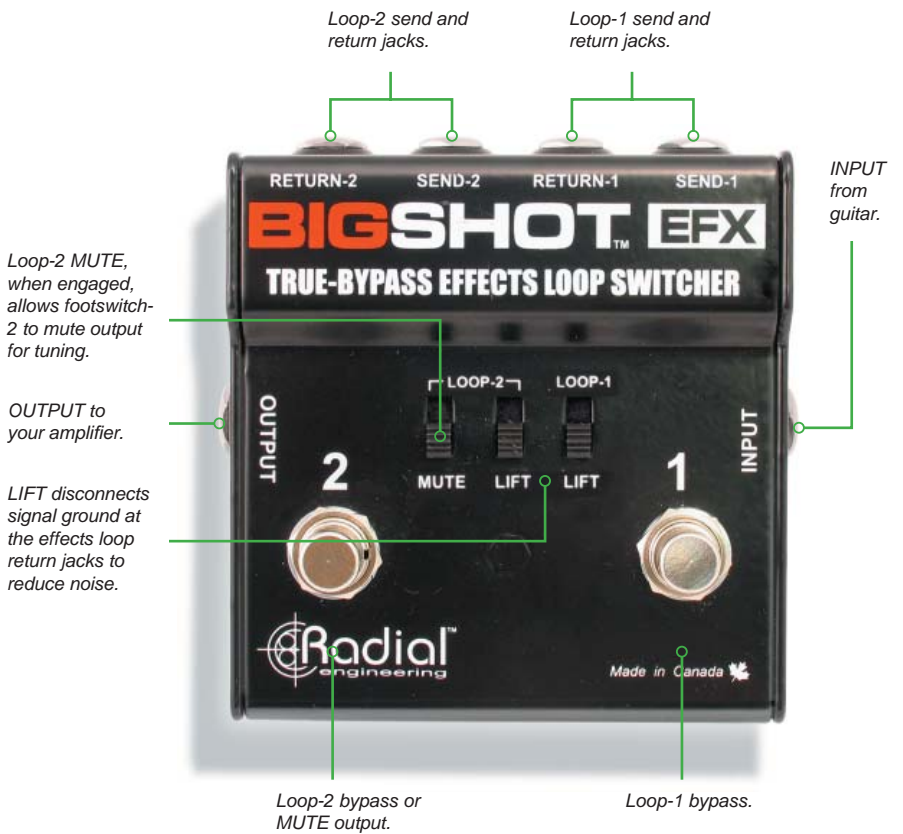

- Switch between rhythm & lead pedal-chains
- Switch noisy pedals out of the signal chain
- Stomp and tune in silence

Cool Stuff

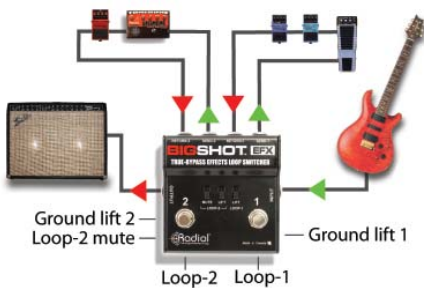

- Easy to use and set-up
- No battery, no wall-wart, no power required
- Works with all instruments, guitar, bass, keys

Dimensions (W x D x H)

- 3.6" x 4" x 2" (92mm x 100mm x 51mm)
- 3 Year transferable warranty

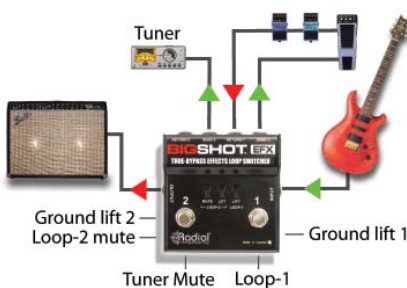

Switch Between Two Effect Chains

A true-bypass effects-loop is a handy tool to have on your pedalboard. Set up loop-1 for a rhythm sound and kick in a high-gain pedal with loop-2 for lead. Or use a loop to remove a tone sucking pedal from of the signal chain.

Effects Loop With A Tuner-mute

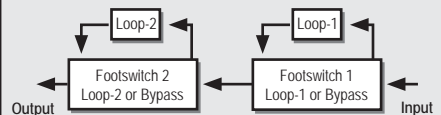

The MUTE option on loop-2 is a nice feature that lets you use loop-2 as a tuner-mute. Connect a tuner to the SEND-2 jack. When engaged, stomping on loop-2 will mute your amp and allow for silent tuning. It gets the tuner out of your way and you don't have to worry about the battery cutting out.

Effects-loops in Series

The two effect loops on the BigShot EFX are wired in series. The guitar signal hits loop-1 first followed by loop-2. If loop-1 is bypassed the input signal goes straight to loop-2. Consider placing your distortion and fuzz pedals in loop-1 and modulation pedals like chorus and delay in loop-2.

LOOP-1	LOOP-2
• Wah	• Distortion
• Compression	• Chorus
• Fuzz	• Delay
• Distortion	• Tremolo
